

AIDS Cases by Age and Sex Reported 1981-1999, United States

AIDS Cases by Age and Sex, Reported 1981-1999, United States

Since 1981, 733,374 cases of AIDS have been reported to CDC; 83% of these cases were among men and 17% among women. One percent of cases (8,718 cases) have been reported in children under 13 years of age. Forty-five percent of men and 43% of women were 30-39 years of age at diagnosis. Sixteen percent of men and 21% of women were in their 20s and 27% of men and 22% of women were in their 40s. Overall, a slightly larger proportion of adolescent cases have been reported in women than in men, 1% vs. 0.3. In 1999, 263 cases were reported among children under 13 years of age and 312 cases were reported among adolescents 13-19 years old. Of the adolescents reported, 132 were young men and 180 were young women.
